

Customer Portal — Developer Assignment

Laravel / POS project | Assign to: Laravel Developer | Generated: 22 Jul 2026

EPIC

Finish the remaining Customer Portal work (web session portal + employee POS credit redeem).

Already done (do not rebuild): store-credit wallet, ledger, earn-on-paid, shared `/login` for customers, portal pages scaffold, API credits/vehicles, order-detail “Use Store Credit” (any balance > 0).

Your job: UI consistency, credits history polish, POS new-order credit with ≥ 50 unlock rule, vehicles / password / PDF, docs + QA.

1. Locked product rules

- **Credit unlock:** Customer balance must be $\geq$ **tenant setting** (default **50** in shop currency) before any store credit can be applied. Once unlocked, partial redemption up to balance/due is allowed.
- **In scope:** vehicles page, change password, order PDF.
- **Out of scope:** Flutter UI, credit expiry worker, appointments, separate customer login page.

2. Reference files

Docs: docs/customer-portal.md

Portal: routes/customer.php , app/Http/Controllers/Customer/PortalController.php , resources/views/customer/* , resources/views/layouts/customer-portal.blade.php

Credits: app/Services/CreditService.php , app/Repositories/OrdersRepository.php (`payment.credits_applied`)

POS gap: public/assets/js/employee/new-order.js (no `credits_applied` yet), resources/views/employee/order/new-order.blade.php

UI reference: employee portal patterns — `x-employee.page-header` , public/assets/css/employee-orders.css (adapt; don't hard-couple customer routes to employee CSS)

Settings pattern: `Tenant::DEFAULT_SETTINGS` + `ShopSettingsRepository` (loyalty section)

Tests: tests/Feature/Customer/CustomerPortalCreditTest.php

3. Ticket backlog (assignable)

Epic A — Match customer portal UI to the application

ID	Task	Notes	Est.
A1	Shared customer page chrome + CSS (header, tabs, panels)	New CSS e.g. <code>customer-portal.css</code> ; optional <code>x-customer.page-header</code> ; replace nav-pills with underline tabs	M
A2	Restyle all portal pages to match app	dashboard, orders, order-show, credits, profile, reset — form-label / form-control / btn-primary / btn-label-secondary	M

Acceptance: Desktop + mobile; empty states; Notiflix toasts unchanged; visual parity with employee Cards/Orders.

Epic B — Credits history polish

ID	Task	Notes	Est.
B1	Polish <code>/portal/credits</code>	Balance hero; filters earn/redeem/adjust; type badges; order link; balance after; empty + pagination	S
B2	Dashboard credit summary	Balance + last few txns + CTA; show unlock messaging until balance $\geq$ threshold	S

Note: History API/web already exist — polish UX, don't rebuild ledger.

Epic C — Use store credit on new order (employee POS)

ID	Task	Depends	Est.	Priority
C1	Tenant setting <code>loyalty.credit_min_redeem_balance</code> (default 50) + server gate	—	S	P0
C2	New-order Store Credit UI + include <code>payment.credits_applied</code> in checkout payload	C1	L	P0
C3	Order-detail Pay Balance modal: same $\geq$ threshold gate (today any balance > 0)	C1	S	P1
C4	Feature/unit tests: reject below threshold; allow above; over-redeem still blocked	C1-C3	S	P1

C2 detail: When selected customer balance $\geq$ threshold $\rightarrow$ show amount / Max / remaining. When below $\rightarrow$ disabled + message. Wire into `currentOrderPayload().payment.credits_applied`. Backend already redeems in `OrdersRepository::store`. Enforce threshold in one shared place (e.g. `CreditService` + `SaveOrderRequest`).

Epic D — More customer self-service

ID	Task	Notes	Est.
D1	Web portal Vehicles page + nav tab	Read-only list OK initially; API <code>GET /api/v1/customer/vehicles</code> already exists	M
D2	Change password while logged in	Current + new + confirm on profile; Laravel Password rules	S
D3	Customer order / visit PDF download	Reuse <code>employee.order.pdf</code> ; authorize own orders only	M

Epic E — Docs & handoff

ID	Task	Est.	Done?
E1	Update <code>docs/customer-portal.md</code> (threshold setting, new-order redeem, new pages)	S	☐

ID	Task	Est.	Done?
E2	QA checklist pass (see section 4)	S	☐

4. QA checklist (Definition of Done)

- ☐ Login via shared `/login` → lands on `/portal`
- ☐ Portal UI matches app (tabs, headers, forms, indigo theme)
- ☐ Credits history filters + pagination work
- ☐ New order: customer balance < 50 → credit locked with clear message
- ☐ New order: balance ≥ 50 → apply partial/full credit; payment row shows `store_credit`
- ☐ Order-detail pay modal respects same threshold
- ☐ Vehicles page lists customer’s vehicles only
- ☐ Change password works; wrong current password rejected
- ☐ Order PDF downloads for own order only
- ☐ Regression: earn-on-paid still works; staff adjust credit still works
- ☐ Tests green for credit threshold + existing portal credit tests

5. Suggested build order

A1 → A2 → B1/B2 → **C1 → C2 → C3 → C4** → D1 → D2 → D3 → E1/E2

Ship C1+C2 first if POS credit is the business priority; UI polish can run in parallel.

6. Sign-off
